ricki famosa source 1. It has been stated that the majority of kids

find a way to abuse the remote and turn themselves into monsters in an instant. Selective destruction of guinea pig retinal ganglion cells by capsaicin. The effect of capsaicin on retinal ganglion cells was investigated in the guinea pig using retrograde transport of Fast Blue. Animals were given unilateral intraperitoneal injections of 0, 1.25, 2.5 or 5.0 mg/kg of capsaicin. Unilateral, large (greater than 100 micron) Fast Blue deposits were visualized under the microscope in the

ganglion cell layer ipsilateral to the injection site. In control animals almost all retrogradely labeled ganglion cells had large somas with a lightly stained glial cell body. The contralateral eye contained sparsely-labelled ganglion cells with significantly smaller somas than those in the contralateral control. The density of retrogradely labeled ganglion cells was significantly higher in the experimental eyes than in the control eyes. At 5.0 mg/kg, capsaicin treatment induced

massive destruction of ganglion cells with an approximate doubling of the density of retrogradely labeled ganglion cells. Almost 90% of the ganglion cells within the top half of the retina was destroyed by 5.0 mg/kg of capsaicin.

$$m_b \Delta_{\mu} + O(v_c^2).$$
 In momentum space, the contribution from the diagrams in Fig. [Fig:T11vv] with T replaced by \bar{T} is

$$\bar{t}^a \{-2\alpha_s + 4$$

$\frac{1}{N_c} \ln(x_c + y_c)$
